

Web Server

A web server is required for the Admin Web Interface.

Do you want to install lighttpd and the required PHP modules?

NB: If you disable this, and, do not have an existing web server and required PHP modules (sqlite3 xml intl json) installed, the web interface will not function. Additionally the web server user needs to be member of the "pihole" group for full functionality.

< Yes >

< No >

Installation mode

PiVPN uses the following settings that we believe are good defaults for most users. However, we still want to keep flexibility, so if you need to customize them, choose Yes.

- * UDP or TCP protocol: UDP
- * Custom search domain for the DNS field: None
- * Modern features or best compatibility: Modern features (256 bit certificate + additional TLS encryption)

<Yes>

<No>

Default openvpn Port

You can modify the default openvpn port.
Enter a new value or hit 'Enter' to retain the default

1194

<Ok> <Cancel>

Public IP or DNS

Will clients use a Public IP or DNS Name to connect to your server
(press space to select)?

☒ 71.187.90.243 Use this public IP
☐ DNS Entry Use a public DNS

<Ok> <Cancel>
